This week the median list price for Danville, CA is \$934,499 with the market action index hovering around 74. This is less than last month's market action index of 82. Inventory has held steady at or around 2.

MARKET ACTION INDEX

This answers "How's the Market?" by comparing rate of sales versus inventory.

Strong Seller's Market

Market conditions have been consistently cooling in the past several weeks. Because we're still in the Seller's zone, prices have not yet begun to drop. It may take a few more weeks of slack demand for prices to reflect and begin to fall. Expect prices to fall if the index persistently falls to the Buyer's zone.

MEDIAN LIST PRICE

This week saw relatively little price change from last week. However, prices continue demonstrate a nice up trend in general over the last several weeks.

SEGMENTS

Not surprisingly, given the condition of the overall market, all quartiles have shown price strength in recent weeks. All have been increasing in price lately.

PRICE PER SQUARE FOOT

The market appears to be placing an increasing premium on homes. When list prices and price per square foot consistently increase in tandem, as they're doing now, you can often find short-term investment opportunities. Watch the Market Action Index for persistent changes as a leading indicator for these trends to flatten or drop.

INVENTORY

Inventory has been falling in recent weeks. Note that declining inventory alone does not signal a strengthening market. Look to the Market Action Index and Days on Market trends to gauge whether buyer interest is changing with the available supply.

MARKET ACTION INDEX

Market conditions have been consistently cooling in the past several weeks. Because we're still in the Seller's zone, prices have not yet begun to drop. It may take a few more weeks of slack demand for prices to reflect and begin to fall. Expect prices to fall if the index persistently falls to the Buyer's zone.

MARKET ACTION SEGMENTS

Not surprisingly, all segments in the market are showing high levels of demand. Watch the quartiles for changes before the whole market changes. Often one end of the market (e.g. the high-end) will weaken before the rest of the market and signal a slowdown for the whole group.

MEDIAN DAYS ON MARKET (DOM)

The properties have been on the market for an average of 16 days. Half of the listings have come newly on the market in the past 12 or so days. Watch the 90-day DOM trend for signals of a changing market.

SEGMENTS

It is not uncommon for the higher priced homes in an area to take longer to sell than those in the lower quartiles.
